

OFFinder

SDF

Locate phones
in real-time,
even when
turned off!

SDF OFFinder is a powerful new tool designed to help you find dormant cellular devices. Just because it's switched off, no longer means a cellular device is hidden. Applicable to a range of uses from correctional facility administration to law enforcement investigations, OFFinder changes the rules of the game!

Key features

Effective phone detection:

Locate phones even when they're turned off, allowing you to comprehensively monitor all unauthorized devices within your controlled zone.

SIM-free operation:

Our technology can even detect phones without SIM cards, ensuring no device goes unnoticed.

Portable design:

A compact, mobile solution based on a small sensor and directional antenna. All components fit into a lightweight bag, for easy transport and deployment.

User-friendly operation:

The operator follows variable rate audio signals from the directional antenna, enabling precise, real-time location of the phone.

Compact

Portable

Proven Success

OFFinder has already proven its effectiveness!

In a recent demonstration, the device successfully located a hidden phone within seconds. We're excited to offer pre-sales demonstrations to showcase OFFinder's potential in your operations.

Flexible procurement options

OFFinder is available as a standalone solution or, for users of the SDFGuard Tower solution, it is available as an add-on, integrating seamlessly to enhance your facility's security infrastructure.

Purpose-built for correctional facilities
Ready for immediate demonstration!

See firsthand how OFFinder enhances your facility's security by locating hidden, offline phones with unmatched precision.
